The murder of a San Francisco sex worker puts a female detective on the trail of a geopolitical conspiracy against America in this international thriller. What begins as the simple murder of a sex worker becomes so much more as Insp. Kate Dawson follows the clues to a human trafficking ring which specifically targets Asian women. But as the G-20 Summit in San Francisco draws closer, Kate realizes that the stakes are much higher than she could have imagined. The disappearance of five Asian women appears to be connected to the schemes of a mad North Korean general. With a nuclear submarine deployed into American waters, he's planning to bring about economic chaos across the West. As world leaders and economists converge on the annual summit, Kate must prevent terror from breaking out at the G-20. This book offers comprehensive coverage of topics used in engineering solutions for the stiffness and strength of physical systems, with a range of scales from micrometers to kilometers. Coverage integrates a wide array of topics into a unified text, including such subjects as plasticity, fracture, composite materials, energy approaches, and mechanics of microdevices (MEMs). This integrated and unified approach reflects the reality

of modern technology with its demands to learn the fundamentals of new subjects quickly. **FIELD & STREAM**, America's largest outdoor sports magazine, celebrates the outdoor experience with great stories, compelling photography, and sound advice while honoring the traditions hunters and fishermen have passed down for generations. **Truck Nuts! The solution is achieved by identifying the tribological processes and phenomena in the friction nodes of lightweight valves made of titanium alloys and ceramics, both cam and camless driven. The book provides a set of structured information on the current tribological problems in modern internal combustion engines—from an introduction to the valvetrain operation to the processes that produce wear in the components of the valvetrain. A valuable resource for teachers and students of mechanical or automotive engineering, as well as automotive manufacturers, automotive designers, and tuning engineers. Shows the tribological problems occurring in the guide-light valve-seat insert Combines numerical and experimental solutions of wear and friction processes in valvetrain systems Discusses various types of cam and camless drives the valves used in valve trains of internal combustion engines—both SI and CI Examines the materials used, protective layers and geometric parameters of lightweight valves, as well as mating guides and seat inserts Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Now in paperback, with a new foreword by Fred Krupp, an expert's illuminating preview of the cleaner, lighter, smarter cars of the future. In *Driving the Future*, Margo T. Oge portrays a future where clean, intelligent vehicles with lighter frames and alternative power trains will produce zero emissions and run at 100+ mpg. With electronic architectures more like those of airplanes, cars will be smarter and safer, will park themselves, and will network with other vehicles on the road to drive themselves. As the director of the EPA's Office of Transportation and Air Quality, Oge was the chief architect behind the Obama administration's landmark 2012 deal with automakers in the US market to double the fuel efficiency of their fleets and to cut greenhouse gas emissions in half by 2025. This was America's first formal climate action using regulation to reduce emissions through innovation in car design. Offering an insider account of the partnership between federal agencies, California, environmental groups, and car manufacturers that led to the historic deal, Margo discusses the science of climate change, the politics of addressing it, and the lessons learned for policy makers. She also takes the reader through the convergence of macro trends that will drive this innovation over the next forty years and be every bit as transformative as those wrought by Karl Benz and Henry Ford. *Driving the Future* is for anyone who wants to know what car they'll be driving in ten, twenty, or thirty years—and for everyone concerned about air quality and climate change now.
