Breaking the Glass Ceiling documents the achievements of three leaders in Caribbean nursing at the time of the nascent struggle for indigenous leadership in all areas of West Indian society. It is a narrative of the lives of three extraordinary women who gained both regional and international recognition: Dame Nita Barrow of Barbados, Berenice Dolly of Trinidad and Tobago, and Dr. Mary Sievwright of Jamaica. A feminist and colonialist theoretical perspective is used for the exploration of political, social and economic structures of the societies prior and during the nurses' era in order to provide a context for their achievements and contributions. They were bright, black women who embraced each challenge that came their way as an opportunity for growth. This growth was not for personal gain or self-aggrandizement but for the good of womankind and the nursing profession...The single common distinguishing feature of these three women was their selfless devotion to service. They worked relentlessly to improve the image of nursing, the nursing profession, and the status of women. Each one did so in her own unique way, and each had a deep, abiding religious faith. Their stories depict their different approaches to their service to women generally and nursing specifically, whether it was in the international arena, in the Caribbean setting or in their own native land. They were outstanding role models. They rose to prominence in a society in which racism, gender and class distinctions existed and did so with continued vitality and political savvy then most women at the time. They defied tradition within a traditional woman's occupation. They blazed the way for black women and nurses in particular to reach for the top. They were the first black women in nursing in the Caribbean to receive national and international acclaim, albeit not all to the same extent, and were the acknowledged role models for black nurses and women in the region. A clear and accessible introduction to safeguarding adults in nursing practice with a range of clients and across different settings. In *Nursing in an Integrated Digital World that Supports People, Systems, and the Planet*, the leading-edge innovators in digital health applications, global thought leaders, and multinational, cooperative research initiatives are woven together against the backdrop of health equity and policy-setting bodies, such as the United Nations and the World Health Organization. As the authors prepared this book, the world is struggling with the core issues of access to care, access to needed medical equipment and supplies, and access to vaccines. This access theme is reflected throughout the policy and world health chapters with an emphasis on how this COVID-19 pandemic is exposing the fissures, divides, unfairness, and unpreparedness that are in play across our globe. Sustainability and global health policy are linked to the new digital technologies in the chapters that illustrate healthcare delivery modalities that nurse innovators are developing, leading, and using to deliver care to hard-to-reach populations for better population health. A trio of chapters focus on the underlying need for standards to underlie nursing care in order to capture the data needed to enable new science and knowledge discoveries. The authors give particular attention to the cautions, potential for harm, and biases that the artificial intelligence technologies of algorithms and machine learning pose in healthcare. Additionally, they have tapped legal experts to review the legal statutes, government regulations, and civil rights law in place for patients' rights, privacy, and confidentiality, and consents for the United States, the United Kingdom, and the European Union. The book closes with a chapter written by the editors that envisions the near future—the impact that the new digital technologies will have on how care is delivered, expanding care settings into community and home, virtual monitoring, and patient generated data, as well as the numerous ways that nurses' roles and technology skill sets must increase to support the global goals of equal access to healthcare.

Further, how these changes are understood as a paradigm shift that needs to be incorporated along with nursing and healthcare education is emphasized. The effects of technology on human behavior are also explored, addressing human–factors interaction, interdependence of human–computer interaction, and other effects of technology on wellbeing. As part of nursing education, learning from clients/patients to better shape and advance nursing education and scholarship are discussed. Academic–clinical practice partnerships for a digital future, how teams are working together (clinician/teacher) for better healthcare delivery and applied knowledge—including joint appointments (exchange of academia and applied expertise), academic–applied human resources, and interprofessional learning/development—are discussed. This book closes by discussing and using case studies to showcase nursing competencies for the next decade, implications for preparing the healthcare workforce for a digital world, faculty readiness, and the interaction with gaming and simulations.
