Fishing for Souls Jan 19 2020 Fishing for Souls explores the origins and development of fishermen's missions in Britain, focussing particularly on the nineteenth and early twentieth centuries. This book is the first to view the entire picture of a significant, although not broadly known, part of British history, and to add new relevant perspectives. Dr Stephen Friend FRSA establishes 'an historical outline of the development of the churches' work among British fishing communities and explores why a mission specifically concerned with fishermen was not initiated until the industry entered a period of economic decline during the early 1880s. The factors relating to the development of British fisherman's missions are complex, involving not only social and technological changes inside and outside the fishing industry, but also changing theological perceptions that had a significant impact on attitudes to social conditions'. With its honesty and objectivity about developments, especially those that were difficult and painful for the fishermen's mission societies at the time, Fishing for Souls reveals the magnificent work that the various societies did, and in some cases continue to do, making it evident to all the readers.

Probability and Statistics for Engineers and Scientists: Pearson New International Edition Mar 13 2022 For junior/senior undergraduates taking probability and statistics as applied to engineering, science, or computer science. This classic text provides a rigorous introduction to basic probability theory and statistical inference, with a unique balance between theory and methodology. Interesting, relevant applications use real data from actual studies, showing how the concepts and methods can be used to solve problems in the field. This revision focuses on improved clarity and deeper understanding. This latest edition is also available in as an enhanced Pearson eText. This exciting new version features an embedded version of StatCrunch, allowing students to analyze data sets while reading the book.

Perceptual Computing Aug 26 2020 Explains for the first time how "computing with words" can aid in making subjective judgments Lotfi Zadeh, the father of fuzzy logic, coined the phrase "computing with words" (CWW) to describe a methodology in which the objects of computation are words and propositions drawn from a natural language. Perceptual Computing explains how to implement CWW to aid in the important area of making subjective judgments, using a methodology that leads to an interactive device—a "Perceptual Computer"—that propagates random and linguistic uncertainties into the subjective judgment in a way that can be modeled and observed by the judgment maker. This book focuses on the three components of a Perceptual Computer—encoder, CWW engines, and decoder—and then provides detailed applications for each. It uses interval type-2 fuzzy sets (IT2 FSs) and fuzzy logic as the mathematical vehicle for perceptual computing, because such fuzzy sets can model first-order linguistic uncertainties whereas the usual kind of fuzzy sets cannot. Drawing upon the work on subjective judgments that Jerry Mendel and his students completed over the past decade, Perceptual Computing shows readers how to: Map word-data with its inherent uncertainties into an IT2 FS that captures these uncertainties Use uncertainty measures to quantify linguistic uncertainties Compare IT2 FSs by using similarity

and rank Compute the submethod of one IT2 FS in another such set Aggregate disparate data, ranging from numbers to uniformly weighted intervals to nonuniformly weighted intervals to words Aggregate multiple-fired IF-THEN rules so that the integrity of word IT2 FS models is preserved Free MATLAB-based software is also available online so readers can apply the methodology of perceptual computing immediately, and even try to improve upon it. Perceptual Computing is an important go-to for researchers and students in the fields of artificial intelligence and fuzzy logic, as well as for operations researchers, decision makers, psychologists, computer scientists, and computational intelligence experts.

Modern Aspects of Electrochemistry 40 Dec 18 2019 This volume in the acclaimed series Modern Aspects of Electrochemistry starts with a dedication to the late Professor Brian Conway who for 50 years helped to guide this series to its current prominence. The remainder of the volume is then devoted to the following topics: PEM fuel cells; the use of graphs in electrochemical reaction networks; nanomaterials in Lithium-ion batteries; direct methanol fuel cells (two chapters); fuel cell catalyst layers. The book is for electrochemists, electrochemical engineers, fuel cell workers and energy generation workers.

Management of Contaminated Site Problems Mar 21 2020 For all aspects of managing contaminated sites - from diagnosis and site characterization to the development and implementation of site restoration programs - Management of Contaminated Site Problems provides you with all the tools and techniques you need. This excellent new resource on understanding and managing environmental contamination problems in general, and contaminated sites in particular, represents a collection and synthesis of modern issues. It defines common procedures used in the planning, development, and evaluation of corrective measures for potentially contaminated sites and facilities. It also includes example analyses and workplans for evaluating and implementing corrective measures.

Sir Robert Walpole's Poets Sep 07 2021 "During Sir Robert Walpole's term as "Prime Minister" exorbitant amounts of money were spent on propaganda in support of his administration. Since nearly all the major writers of the period adopted an anti-government stance, however, historians have shown far more interest in the organization and contents of opposition propaganda than in its pro-government counterpart. This book is the first comprehensive study of the literature published in support of Walpole's administration, and explores important pro-government themes, and also explains how the propaganda network was organized and what precisely the Old Corps Whig leadership hoped to achieve."--

Knowledge Based Systems Oct 08 2021 The field of knowledge-based systems (KBS) has expanded enormously during the last years, and many important techniques and tools are currently available. Applications of KBS range from medicine to engineering and aerospace. This book provides a selected set of state-of-the-art contributions that present advanced techniques, tools and applications. These contributions have been prepared by a group of eminent researchers and professionals in the field. The theoretical topics covered include: knowledge acquisition, machine learning, genetic algorithms, knowledge management and processing under uncertainty, conflict detection and resolution, structured knowledge architectures, and natural language-based man-machine communication. The Applications include: Real-time decision support, system fault diagnosis, quality assessment, manufacturing production, robotic assembly, and robotic welding. The reader can save considerable time in searching the scattered literature in the field, and can find here a powerful set of how-to-do issues and results.
